Financial Performance Analysis

Interactive Excel Dashboard | Project Portfolio

Project Overview

This project focuses on building an interactive financial dashboard in Microsoft Excel to bring together financial performance data for the USA and Canada. The dashboard makes revenue, profitability and cost performance easier to explore across countries, years, services and customer types. The goal was to move from fragmented financial information towards a consolidated view that supports performance monitoring and informed business decisions.

Objectives

• Consolidate financial performance data for the USA and Canada.

• Compare revenue and EBITDA trends over time.

• Evaluate profitability across service lines and countries.

• Break down the key components contributing to EBITDA.

• Enable interactive analysis through PivotTables, PivotCharts and slicers.

Dashboard Features & Approach

The dashboard combines analytical views covering Revenue by Country, Revenue vs. EBITDA, Margin Analysis, Service Profitability and an EBITDA Bridge. Interactive filters allow users to explore results by Customer Type, Service, Year and Country. The workbook uses Excel data-analysis tools and functions, including PivotTables, PivotCharts, slicers, lookup functions and GETPIVOTDATA-based calculations to connect dashboard outputs with selected filters.

Headline Results

£1,730,862	**£1,044,085**	**£273,780**
Total Revenue	Gross Profit	EBITDA
60.3%	**15.8%**	**USA**
Gross Profit Margin	EBITDA Margin	Largest revenue contributor

Figures reflect the corrected dataset used for the analysis. Values are presented in GBP.

Key Business Insights

• **USA is the main revenue contributor.** Revenue from the USA totals £1,494,164, compared with £236,698 from Canada. The business is therefore substantially more dependent on the US market in terms of revenue.

• **Profitability is relatively consistent across markets.** Canada has an approximate gross margin of 63%, compared with around 60% in the USA. EBITDA margins are approximately 16% in both countries.

• **Marketing requires attention in the 2024 forecast.** Marketing revenue decreases from £132,246 in 2023 to £99,621 in 2024, a decline of approximately 24.7%. This is a forecast-based signal to investigate, not evidence of a confirmed actual-year decline.

Recommendations

• Investigate the drivers of the forecast decline in Marketing revenue, including customer demand, pricing and pipeline assumptions.

• Review revenue concentration in the USA and assess opportunities to grow the Canadian market.

• Track gross margin and EBITDA margin by service line to identify opportunities for pricing or cost improvements.

• Use the dashboard filters in regular performance reviews to compare periods, markets, services and customer types.

Conclusion

The project delivers an interactive Excel dashboard that brings key financial measures into one place and makes it easier to compare performance across markets, services and time periods. The analysis highlights the USA as the largest revenue contributor, broadly similar EBITDA margins across the two countries, and a forecast decline in Marketing revenue that merits further investigation. The dashboard provides a practical foundation for ongoing financial monitoring and data-informed decision-making.
